

Green Tip

Do we need more of this?

Make a better choice!!

Find an alternative to single-use plastic water bottles and help save our planet, one bottle at a time. Trade single-use plastic bottles for a BPA-free, reusable bottle.

Humans buy about ONE MILLION plastic bottles PER MINUTE and only about 20% are recycled. Most end up in our oceans, break down into microplastics that are consumed by fish, and enter our food chain.

Most bottled water is just tap water! According to foodandwaterwatch.org, "Bottled water generally is no cleaner, or safer, or healthier than tap water. In fact, the federal government requires far more rigorous and frequent safety testing and monitoring of municipal drinking water." Plus, bottled water removes resources from one community to ship water elsewhere, and is about 3,000% more expensive than tap water!

MAKE THE SMART CHOICE! CHOOSE TO REUSE!!
