1980  The path of Peter’s Marsh Brook.
2005 Satellite Photo     This shows how the retention pond was put right on top of Peter’s Marsh Brook.
Peter’s Marsh Brook is typically an underground water flow. Only during flood season could one find surface flow. And the underground flow was messed with in the 70’s and 80’s, but in 2004 it was ultimately blocked by more landfill and a retention pond. Isn’t it obvious?
Peter's Marsh Brook used to flow all the way to the Salmon Falls River. And needs to again. -Today!
